

Design exploration · September 2026

Purveyors Brand 2.0

The living ledger of the green coffee market.

A professional brand, design-system, and UI/UX direction built from the current field-journal foundation.

Prepared for Purveyors · Exploration, not implementation specification

Executive recommendation

Do not redesign the brand. Make its intelligence unmistakably proprietary.

01

Keep the foundation

Warm canvas, Newsreader headlines, calm density, peach action color, earth-tone chart system, and the “field journal” idea are all sound.

02

Own the proof layer

Turn source records, freshness, confidence, lot identity, and movement into visible UI signatures, not supporting metadata.

03

Design the decision loop

Every key surface should move from market signal to evidence to comparison to action, without forcing users through product silos.

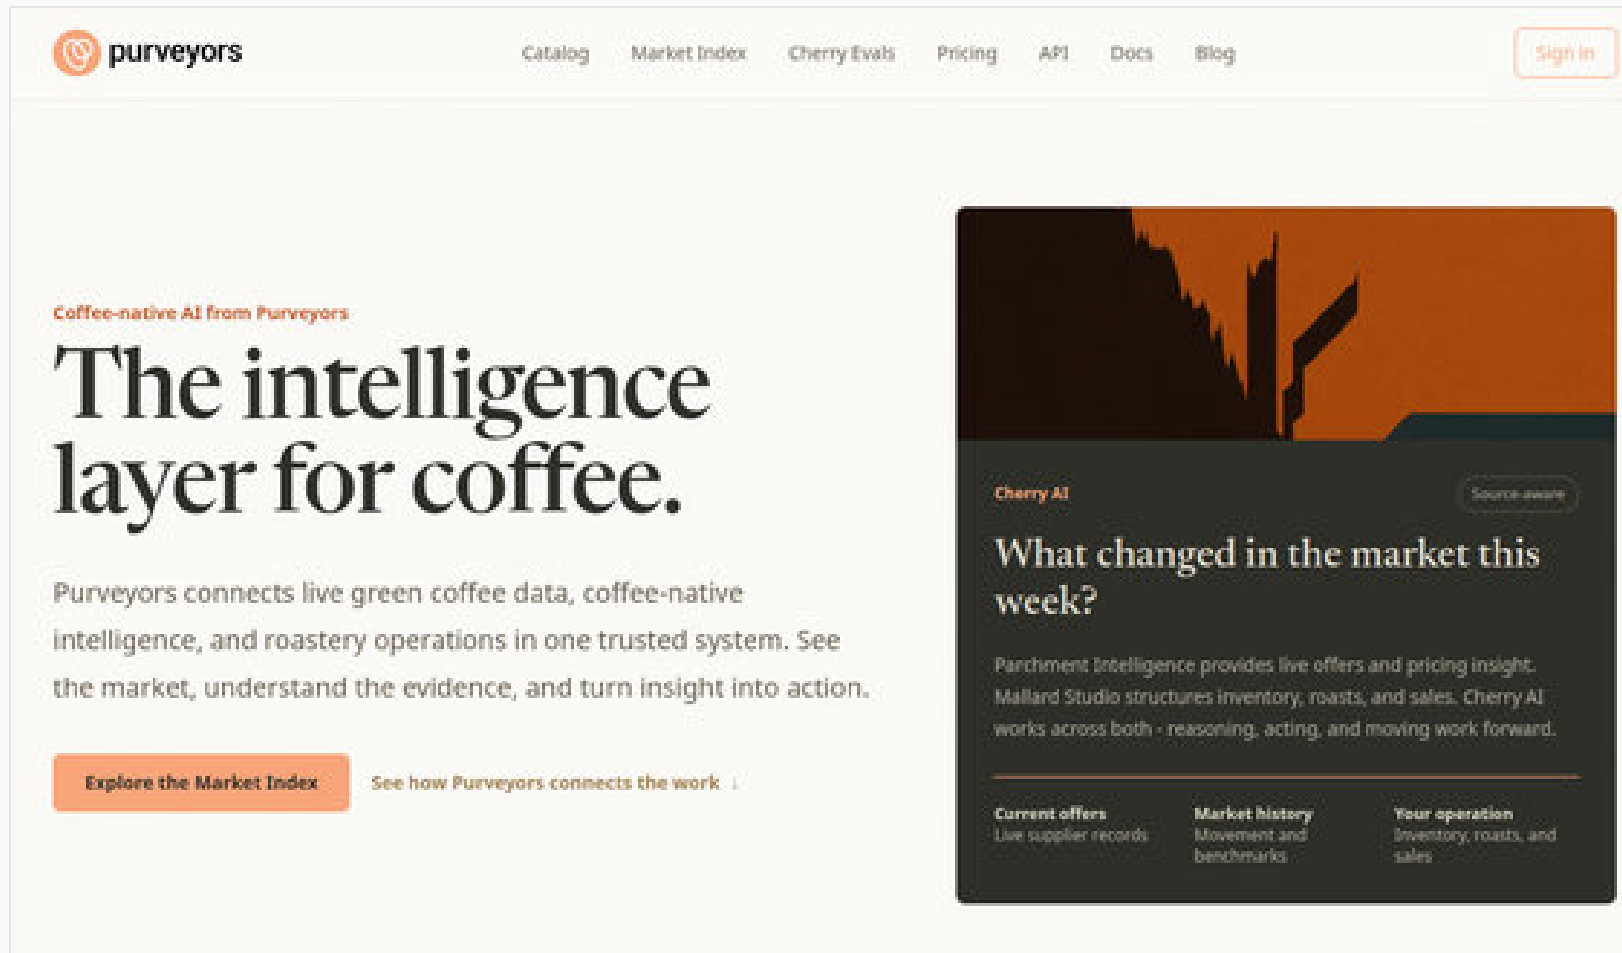

Brand 2.0 = a field journal that behaves like a market instrument.

Recommended north star

What is already working

The current homepage has a real point of view.

Live capture from purveyors.io, September 12, 2026.

Strong signals

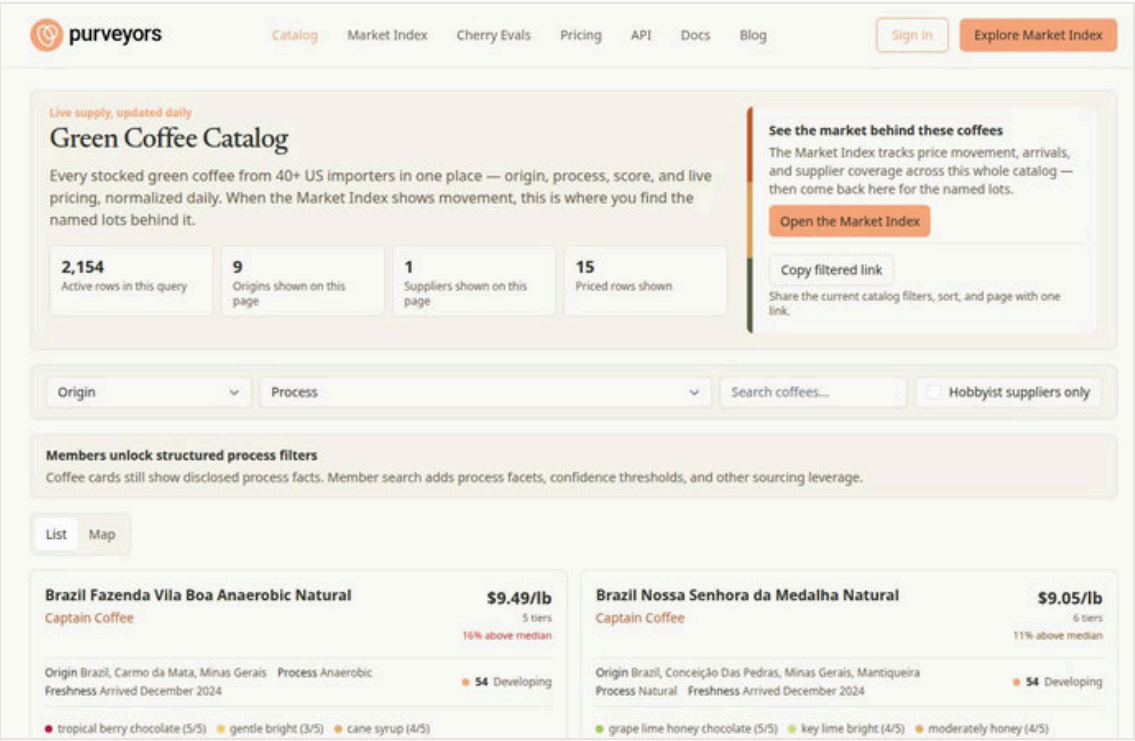

- Editorial typography immediately lifts the category.
- Warm surfaces avoid enterprise-software coldness.
- Market proof appears before the paywall.
- Product architecture is becoming legible.
- The dark Cherry AI card creates a useful focal point.

Core observation

The redesign work from July is visible. Brand 2.0 should compound it, not restart it.

Where the system still flattens

The product is credible, but too many surfaces still resolve to “good warm SaaS.”

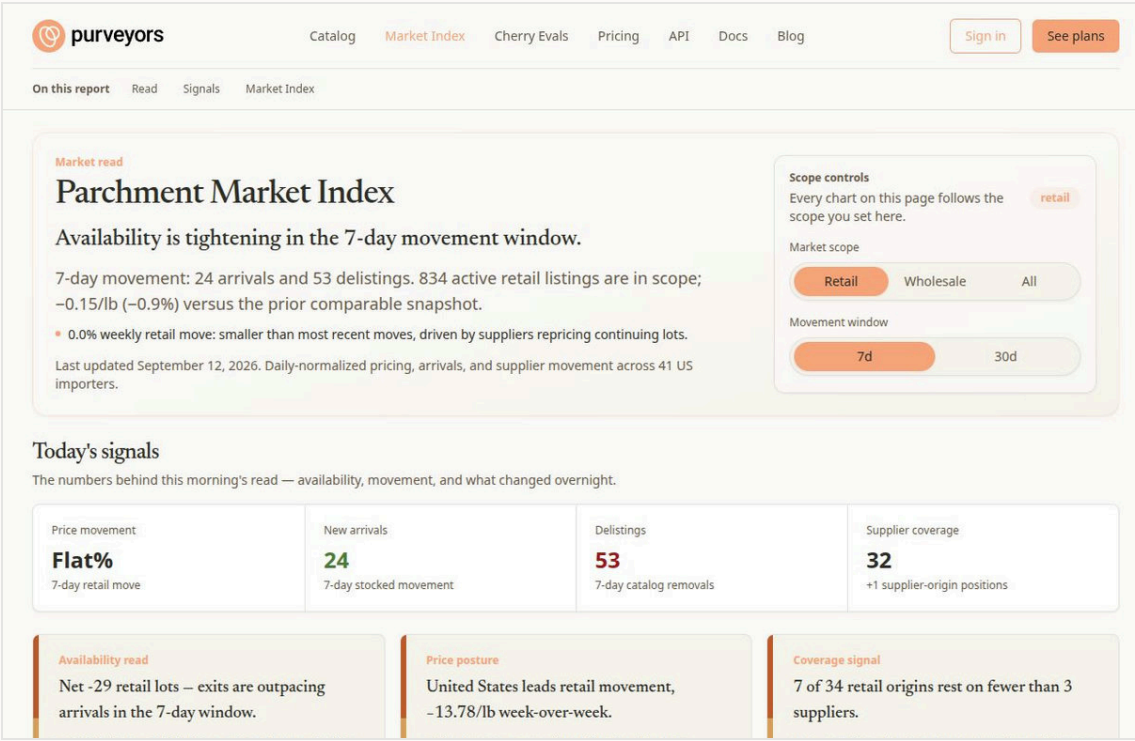

Card repetition

Borders and rectangles do most of the structure work, so distinct products can feel visually interchangeable.

Evidence is secondary

Provenance exists, but it is not yet the strongest visual signature of the experience.

Scan-to-action gap

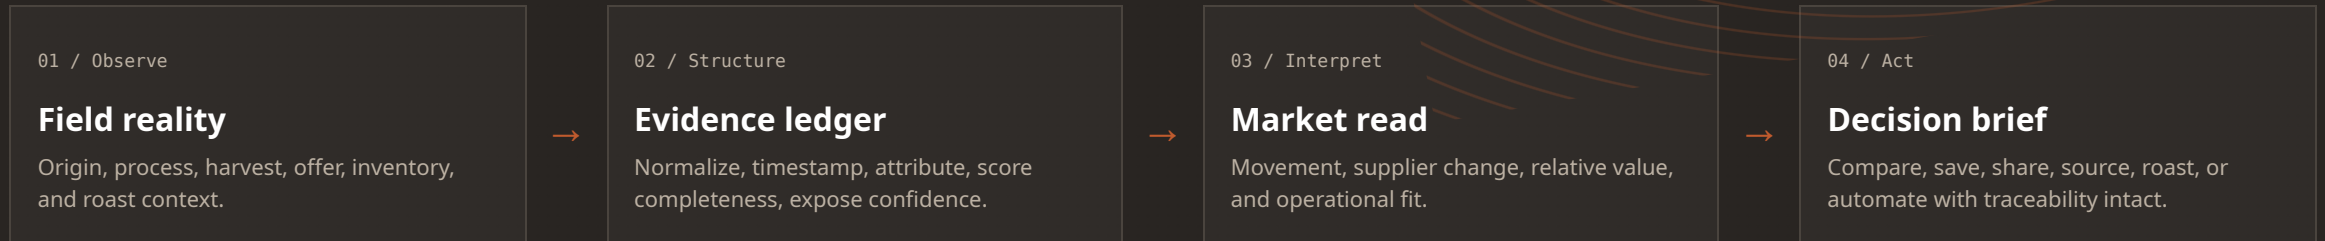

Catalog and index support reading well, but comparison and next-step affordances are understated.

Limited image identity

Brand imagery is coherent but sparse. Real field texture has not become a reusable system.

The living ledger

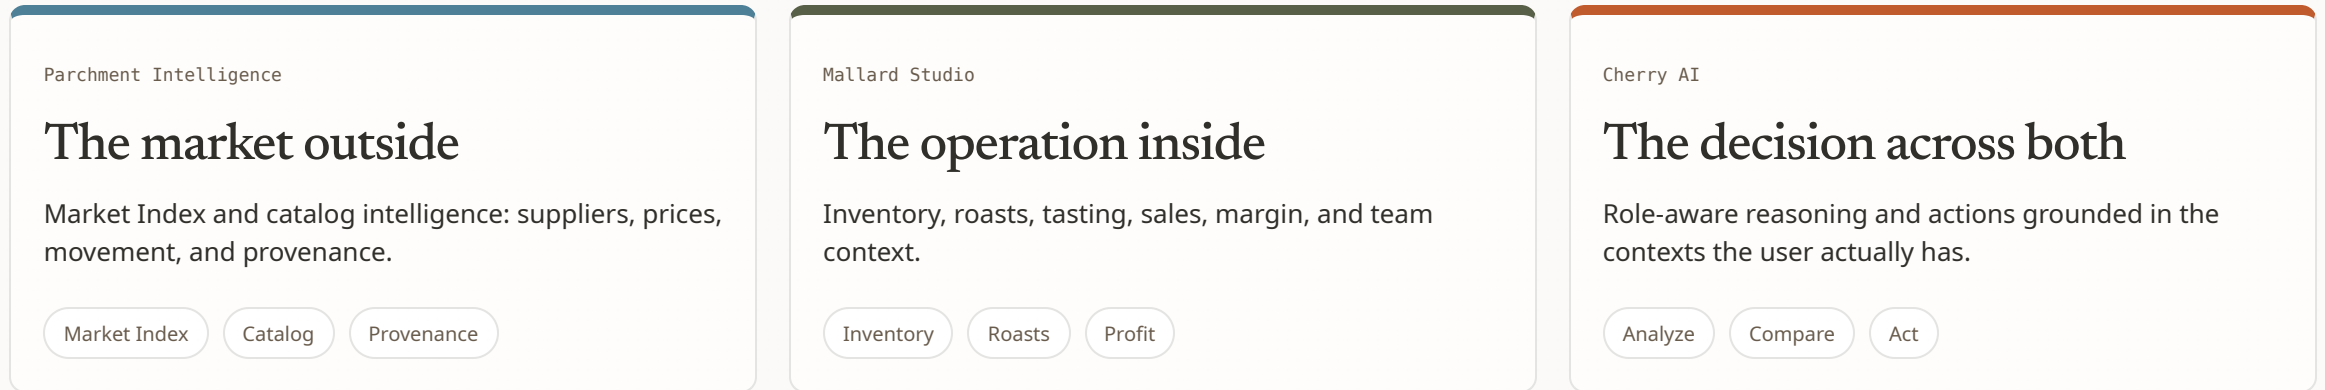

Every signal begins with a real place, lot, supplier, and moment in time.

The brand promise is legibility under uncertainty.

One system, three contexts

Organize the experience around the user's question, then disclose where the answer came from.

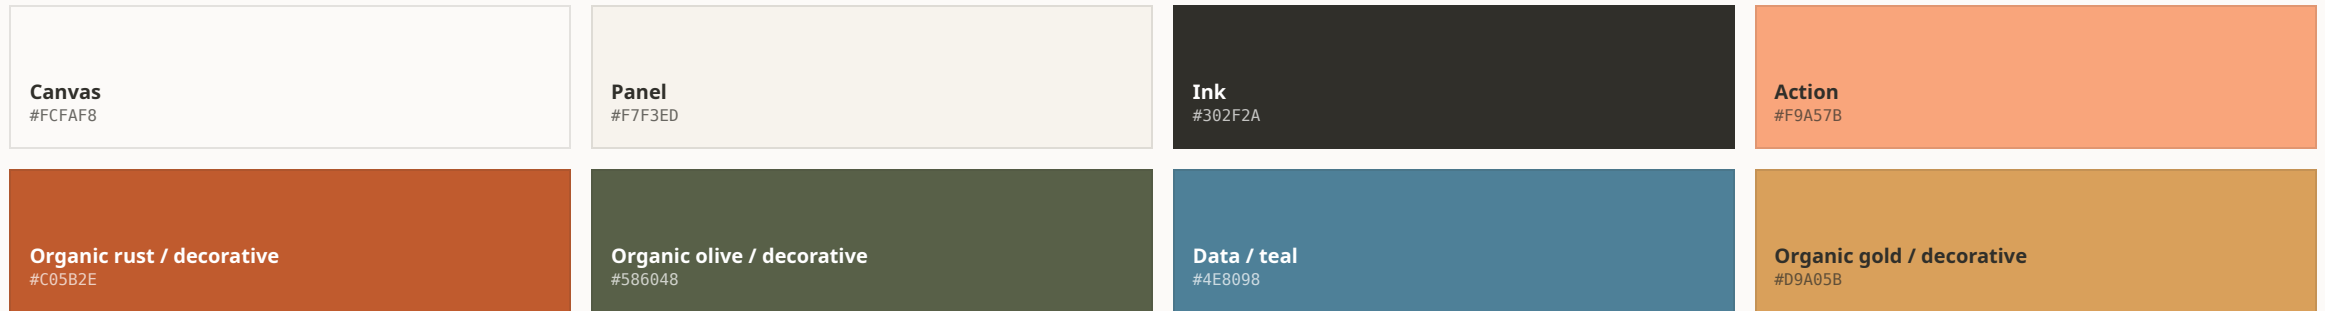

Navigation principle

Preserve product names for orientation, but let shared workflows cross product boundaries. A sourcing brief may combine Parchment Intelligence evidence, Mallard constraints, and Cherry AI interpretation without making the user understand the architecture first.

Color roles

Keep the current palette. Tighten its jobs.

Orange remains the brand/action accent. Cool colors earn their place through data and context.

Typography

Newsreader carries the read.

System sans carries the work.

Serif is for editorial statements, market reads, and chapter titles. Sans is for controls, tables, charts, and operational density. Monospace is reserved for time, price, IDs, and machine contracts.

Use color sparingly

- Peach: primary action or selected state, not ambient decoration.
- Chart tokens encode data meaning; organic rust, gold, and olive remain decorative.
- Espresso: editorial emphasis and trusted handoff moments.
- Never rely on color alone for status or confidence.

Recognizable without a logo

Six elements that make the interface feel owned.

01

Evidence rail

A thin vertical line that encodes source type or confidence and always leads to the source record.

02

Lot identity strip

Origin · region · process · harvest · supplier, in a fixed order that trains scanning across the product.

03

Freshness clock

Timestamp + human interval + source heartbeat. “Updated 2h ago” is proof, not decoration.

04

Signal trace

A restrained line, seam, or ledger tick for movement. It replaces decorative graphs and blobs.

05

Decision brief

A reusable artifact with claim, supporting evidence, confidence, constraints, and next actions.

06

Terrain contour

A quiet mapping motif for chapter boundaries and empty regions, never behind dense data or copy.

Signal

Source

Compare

Decision

Act

This sequence should be visible in every important workflow, even when the steps collapse into one screen.

The living market ledger

Lead with a market read, then let the page prove it.

Exploratory AI-generated UI. Directional composition, not pixel specification.

The whole green coffee market, made legible.

Trusted data, real relationships, and deeper context for a more resilient coffee future.

→

What changes

From product brochure to living proof.

The homepage becomes a composed editorial spread where live offers, supplier movement, and evidence are the visual centerpiece.

1

One claim

A shorter hero promise with one market-led primary action.

2

One live read

Use current data so the brand demonstrates intelligence immediately.

3

One evidence system

Sources, dates, and coverage become a repeatable visual signature.

4

Three pathways

Parchment Intelligence, Mallard Studio, and Parchment API remain clear without dominating the story.

Copy direction

“The whole green coffee market, made legible.”

Recommended as campaign / exploration language. Validate against product positioning before replacing the current homepage H1.

Evidence cockpit

Every market claim should open into its proof.

The evidence drawer is the key Brand 2.0 interaction, not ornamental chart styling.

Tasting Notes

Stone fruit • Honey • Clean

A crisp and expressive cup with stone fruit, floral honey, and a clean, lingering finish.

Purveyor Score

92

An independent assessment of listing metadata completeness, structure, confidence, and buyer usefulness.

Add to comparison

Open supplier listing

12

Progressive disclosure

The card is for scanning. The rail is for deciding.

Collapsed card

Identity + economics

Name, supplier, origin, process, freshness, baseline price, tasting cue, and Purveyor Score (metadata completeness, structure, confidence, and buyer usefulness).

Detail rail

Proof + fit

Process disclosure, source record, price history, availability, confidence, comparison action.

Comparison tray

Trade-offs

Three to four lots, fixed attributes, visible constraints, no full-page context switch.

Decision brief

Actionable artifact

Save, share, request sample, confirm availability, or analyze in Cherry AI.

Do

- Keep results visible while inspecting a lot.
- Make active filters readable at a glance.
- Use the same identity ordering everywhere.
- Define Purveyor Score at the point of use as metadata completeness, structure, confidence, and buyer usefulness.

Do not

- Turn the catalog into an ecommerce storefront.
- Let photography outrank data completeness.
- Use scores without definition or provenance.
- Hide supplier links behind generic overflow menus.

Decision workflow

Cherry AI should feel like structured intelligence, not a chatbot.

Four states: Today, evidence context, lot comparison, saved sourcing brief.

14

Terrain becomes data

Use imagery where emotion and place matter. Use UI where proof matters.

Image recipe

- Real place or material texture
- Archival botanical linework
- Quiet terrain / lot contours
- One restrained signal trace
- No text baked into reusable artwork

Use for

Homepage hero crops, enterprise moments, About, research/editorial covers, empty-state chapter art.

Avoid

Generic farm stock, roasted-bean macro photography, latte art, rustic café signals, or art behind tables and charts.

Calm, directional, informative

Motion should explain what changed or where the evidence came from.

120–180ms

Controls

State changes and hover feedback. No elastic bounce.

180–240ms

Rails

Detail and evidence panels slide from the contextual edge.

240–360ms

Data change

Charts interpolate only when scope or window changes.

Reduced motion

Respect

Use fades or immediate state changes; preserve all meaning.

A user should never wonder whether motion was decoration, loading, or evidence changing.

Focus

2px visible ring, accent or high-contrast ink, with offset on warm surfaces.

Loading

Label the object being refreshed: “Updating supplier movement,” not “Loading.”

Feedback

Confirm save/share actions inline and preserve the artifact’s state.

Design governance

Brand quality is a product contract, not a moodboard.

Accessibility and trust

- WCAG AA contrast for text and controls.
- Color-blind-safe chart series, with direct labels.
- Confidence expressed with text and source count, not hue alone.
- Keyboard path for drawers, comparison, and evidence records.
- Reduced-motion and data-refresh announcements.

Consistency checks

- Role tokens only, no raw palette drift in new UI.
- One identity-field order across cards, rails, tables, and exports.
- One evidence model across Parchment Intelligence, Mallard Studio, and Cherry AI.
- Editorial serif never leaks into dense operational controls.
- No invented claims, photography, or provenance.

≤ 1

Primary CTA per anonymous view.

3–4

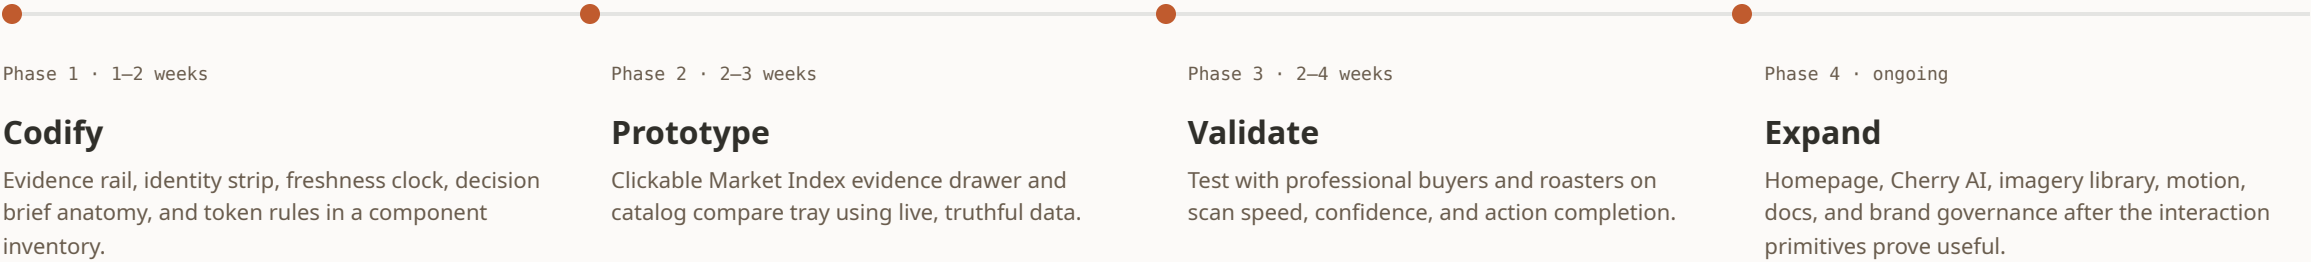

Lots in a useful comparison set.

100%

Decision claims traceable to evidence or clearly labeled inference.

Recommended sequence

Prototype the proof layer before expanding the visual language.

First implementation candidate

Market Index evidence drawer. It is high leverage, visibly differentiated, and exercises the brand promise without requiring a site-wide redesign.

Success signals

Faster source inspection · more comparison starts · more saved briefs · fewer navigation hops · stronger confidence in data recency.

What to decide next

Five decisions unlock a buildable Brand 2.0.

01

Adopt the “living ledger” articulation?

Recommended as the internal design north star, not necessarily the public tagline.

02

Make evidence a persistent side rail?

Recommended for Market Index, catalog details, and Cherry AI artifacts.

03

Add source-linked lot photography?

Only when coverage and rights are reliable; never make it a required card field.

04

Standardize a comparison tray?

Recommended as a shared pattern across catalog and Cherry AI workflows.

05

Commission the terrain-data asset family?

Prototype one hero and one editorial cover first, then assess reuse.

Guardrail

Treat all generated screens as directional.

Copy, metrics, photography, and field availability must be verified before implementation.

Purveyors Brand 2.0

Make the market legible. Make the evidence visible.

Recommended next move: prototype the Market Index evidence drawer
and catalog comparison tray before commissioning a full visual rollout.

Exploration package · Source HTML and generated assets included
